This Office action is in response to applicant's amendments and arguments of 9/9/2005.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Nelson on 12/9/2005.

Cancel claims 2-3, 8-13, 15 and 19-32.

Claim 1. (Currently amended) An insect bait comprising:

- (a) a plurality of free amino acids in a concentration range of 2-7 g/100 ml of insect bait wherein one of the amino acids is asparagine in the concentration range of 1-5 g/100 ml of insect bait;
 - (b) a sugar; and
 - (c) a preservative.

It is noted that claim 19 is canceled herein because it is identical in scope to claim 7.

Art Unit: 1616

JP 52-57325 is partially translated for completeness of the record and cited herein to further show the state of the art. At page 2, left column, Embodiment 1, it is disclosed that a mixture of amino acids, which includes asparagine, is heated with water, fructose and maltose. A 130 g of a brown paste is disclosed. Assuming that none of the amino acids evaporate during the heating process, the disclosure shows 26 g amino acids in 130 g of the brown paste. This is about 20 wt/wt%. Even prior to the heating step, the amino acid mixture represents 26 g/100 ml. The amino acid content is therefore too high in comparison to the instant claimed invention. There appears to be insufficient suggestion or motivation to modify the amino acid concentration and still arrive at the instant claimed invention. See also applicant's remarks on page 13 of the 9/9/05 response.
